The staff of The Docking Institute of Public Affairs and its Center for Survey Research specialize in the design and implementation of local and state telephone and mail surveys for academic, government, and non-profit organizations. Over the past five years, The Docking Institute's CSR has conducted over 60 telephone and selfadministered mail surveys for government and non-profit agencies. If you have any questions, comments, or need assistance, do not hesitate to call one of our staff.

## Report Prepared For:

Dodge City/Ford County Development Corporation

## Dodge City Labor Availability Analysis Executive Summary

The Dodge City labor basin encompasses seven counties in Southwest Kansas. The purpose of this report is to assess the "available labor pool" in this labor basin. The "available labor pool" represents those who indicate that they are either looking for employment, or would consider changing their jobs for the right employment opportunity.

The Docking Institute of Public Affairs' independent analysis of this labor basin shows that:

- There is an available labor pool in the Dodge City labor basin of 13,127. It is estimated that 980 unemployed and 2,286 employed workers are seeking new employment, while 9,862 would consider changing employment for the right opportunities.
- $63.5 \%$ of the available labor pool have at least some college education. A total of 87.5\% have at least a high school diploma.
- $29.3 \%$, or an estimated 3,844 workers in the available labor pool, are underemployed.
- $15.2 \%$ of the available labor pool, or 1,994 people, would be interested in an employment opportunity with a wage of $\$ 8.00$ an hour. At $\$ 10.00$ an hour, 5,234 people ( $39.9 \%$ of the available labor) would be interested, while at $\$ 12.00$ an hour, 6,979 people (53.2\% of the available labor) would be interested.
- Depending on the distance, workers in this area are willing to commute to take advantage of employment opportunities. 11,263 (85.8\% of the available labor) would commute more than 20 miles, one way, for employment. 8,727 (66.5\% of the available labor) are willing to travel more than 30 miles, one way, for an employment opportunity and 2,461 (18.8\%) will commute more than 60 miles.

## Dodge City Labor Availability Analysis

The Dodge City labor basin encompasses seven counties in Southwest Kansas. The criteria used to include a county in this labor basin are whether it has a significant border adjacent to Ford County, if the county is also close in proximity to Dodge City, and if it has an established driving route for commuting to Dodge City. The Dodge City labor basin has a total population of approximately 51,000. It has a civilian labor force of over 27,000 . While there is an unemployment rate of $2.5 \%$, there is, nonetheless, an ample supply of available labor to support a major new employer. The Docking Institute's independent analysis of this labor basin shows that there are 3,265 workers (12.0\%) who are actively seeking new employment and 9,862 (36.1\%) who would consider new employment for the right opportunity.

## Dodge City Labor Basin

Created by - Beau Dealy for The Docking Institute of Public Affairs. June 2000

## Available Labor Pool

Traditional methods of assessing the dynamics of the labor force have concentrated on census based labor force characteristics like the unemployment rate, average age, education levels, and dominant sectors of employment. Even though these data are useful, especially when examined over time, these census data paint an incomplete picture. For example, most new employers draw their workforce from those who are presently employed, not those who are unemployed. In addition, these census based data could stereotype a community that is dominated by manufacturing employment as one that would not support the labor needs of a service sector/information based employer, even though the quantity and qualifications of workers who would likely apply for this type of employment may be sufficient to support the needs of this type of employer. In sum, these aggregate data simply cannot reveal the quantity or quality of the labor pool that would be available for new employment opportunities.

This section assesses the characteristics of the available labor pool in the Dodge City labor basin by answering the following questions: 1) What proportion of the labor force--employed, unemployed, homemaker, and retired--would seriously consider applying for a new employment opportunity? 2) What types of considerations (pay, benefits, commuting distance) shape their decision-making? 3) What is the quality of those who would seriously consider a new employment opportunity?

The "available labor pool" represents those who indicate that they are either looking, or would consider changing their jobs, for the right employment opportunity. The percent in the available labor pool is derived from a random digit telephone survey of 548 employed, unemployed, and retired adults living in the Dodge City labor basin. When all 548 respondents are included in the analysis, the survey findings have a margin of error of $+/-4.2 \%$. The margin of error for subgroups is higher. Most of these analyses are based on a subgroup of 201 respondents who are members of the civilian labor force, or who are retired, students, or housewives who state they are "available" (see definition above). For these 201 respondents, the survey has a margin of error of $+/-6.9 \%$. The "Methods" section of this report details the survey methods used in this report.

The advantage of this survey methodology is that it allows researchers to ask questions of members of the civilian labor force (people currently working, or receiving unemployment benefits, or unemployed seeking work) and potential members of the labor force (student, retired, homemakers) concerning their availability for new employment. In practice, not all of the available labor pool will apply for a new job opportunity. Rather the available labor pool represents those with a propensity to consider a new job opportunity given their employment expectations.

Combining these survey data with Bureau of Labor statistics data, these analyses use "adjusted" civilian labor force statistics ${ }^{1}$ that take into account the percentage of non-civilians (generally students, homemakers, military, retirees, and long-term unemployed) who are seeking or would consider coming into the civilian labor force under the right conditions.

Based on these calculations, Figure 1 shows that there is an available labor pool in the Dodge City labor basin of 13,127 . It is estimated that 980 unemployed ${ }^{2}$ and 2,286 employed workers are seeking new employment, while 9,862 would consider changing employment for the right opportunities.

Table 1 (next page) shows the various occupations of these 13,127 potential employees. Traditional blue-collar occupations represent about $38.6 \%$ of the occupations. Professional occupations represent $27.2 \%$ of the available labor pool, while service sector jobs comprise another $26.5 \%$. Finally, students, the unemployed, and homemakers represent 7.5\% of the available labor pool.

[^0]Table 1: Occupation

|  | Number | Percent |
| :--- | ---: | ---: |
| Mechanic,Welder | 792 | 6.0 |
| Factory Worker,Meat Packer | 1,187 | 9.0 |
| General Labor | 3,100 | 23.6 |
| Governmental, Business, and other Professional | 2,111 | 16.1 |
| Clerical | 528 | 4.0 |
| Educator or Professor | 1,451 | 11.1 |
| Other White Collar | 1,121 | 8.5 |
| Social Service (e.g.health,babysitting) | 726 | 5.5 |
| Sales, Hotel, Restaurant, Food Service | 1,121 | 8.5 |
| Homemakers and Retirees | 132 | 1.0 |
| Unemployed | 660 | 5.0 |
| Students | 198 | 1.5 |
| Total | 13,127 | 100.0 |

Table 2 shows the gender, age statistics, and educational levels of these 13,127 workers. Over $63 \%$ are men ${ }^{3}$. The average and median years born are (39 years old). $63.5 \%$ of the available labor have at least some college education. A total of $87.5 \%$ have at least a high school diploma.

Table 2: Age, Gender, and Education Level

| Age |  |  |  |
| :--- | ---: | ---: | ---: |
|  | Year Born |  |  |
| Average | 1961 |  |  |
| Median | 1961 |  |  |
|  |  |  |  |
| Gender | Number | Percent |  |
|  | 4,833 | 36.8 |  |
| Female | 8,294 | 63.2 |  |
| Male | 13,127 | 100.0 |  |
| Total |  |  |  |
|  |  |  |  |
| Highest Level of Education Achieved | Number | Percent | Cum. Percent |
|  | 1,641 | 12.5 | 12.5 |
| Less HS Diploma | 3,151 | 24.0 | 36.5 |
| High School Diploma Only | 3,282 | 25.0 | 61.5 |
| 0-60 College Hours | 722 | 5.5 | 67.0 |
| Associate of Arts | 1,050 | 8.0 | 75.0 |
| 60-120 College Hours | 2,035 | 15.5 | 90.5 |
| Bachelors Degree | 1,247 | 9.5 | 100.0 |
| Graduate Degree | 13,127 | 100.0 |  |
| Total |  |  |  |

[^1]Underemployment-individuals possessing skills and/or training that exceeds the responsibilities of their current job-is a significant issue in many rural communities. To assess the level of underemployment, the survey asked respondents if their skills, education, or talents are underutilized in their current job. Figure 2 shows that about $\mathbf{2 9 . 3}$ \%, or an estimated 3,844 workers in the available labor pool, are underemployed.

Figure 2: Underemployed

Table 3 shows the education levels of these underemployed workers in the available labor pool, with $62.2 \%$ having at least some college education. A total of $90.6 \%$ have at least a high school diploma.

Table 3: Highest Level of Education Achieved Among Underemployed

|  | Number | Percent | Cum. Percent |
| :--- | ---: | ---: | ---: |
| Graduate Degree | 363 | 9.4 | 9.4 |
| Bachelors Degree | 508 | 13.2 | 22.6 |
| 60-120 College Hours | 218 | 5.7 | 28.3 |
| Associate of Arts | 290 | 7.5 | 35.8 |
| O-60 College Hours | 1,015 | 26.4 | 62.3 |
| High School Diploma | 1,088 | 28.3 | 90.6 |
| Less HS Diploma | 363 | 9.4 | 100.0 |
| Total | 3,844 | 100 |  |

The underemployed workers also tend to be currently employed in areas of strong demand. Figure 3 (next page) illustrates that $41 \%$ ( 1,552 people) are in customer service related occupations, $23 \%$ ( 887 people) are in skilled or semi-skilled blue collar occupations, 19\% (739 people) are employed as general laborers, and 17\% (665 people) are in professional positions. ${ }^{4}$

[^2]

Some workers may be available for a new employment opportunity, but are unwilling to switch from their current job to a different type of position. If there are a large percentage of those unwilling to change their job descriptions, it limits the type of employers who can enter the labor basin. But this is not the case in the Dodge City labor basin. Table 4 indicates that $82.5 \%$ of the available labor pool, or 10,828 workers, would be willing to accept a position outside of their primary field of employment (for example, manufacturing employment to service sector employment).

Table 4: Willing to Take Job Outside of Primary Field

|  | Number | Percent |
| :--- | ---: | ---: |
| Yes | 10,828 | 82.5 |
| No | 2,299 | 17.5 |
| Total | 13,127 | 100.0 |

Figure 4 (next page) shows the wage demands of the available labor pool. $15.2 \%$ of the available labor pool, or 1,994 people, would be interested in an employment opportunity with a wage of $\$ 8.00$ an hour. At $\$ 10.00$ an hour, 5,234 people ( $39.9 \%$ of the available labor) would be interested, while at $\$ 12.00$ an hour, 6,979 people ( $53.2 \%$ of the available labor pool) would be interested.

Table 5 indicates that the available labor pool in the Dodge City labor basin is very open to commuting. The table shows 11,263 ( $85.8 \%$ of the available labor) would commute more than 20 miles, one way, for employment. It also shows that 8,727 ( $66.5 \%$ of the available labor) are willing to travel more than 30 miles, one way, for an employment opportunity and 2,461 ( $18.8 \%$ ) will commute more than 60 miles.

Table 5: Distance Available Labor Will Commute

|  | Cumulative |  |
| :---: | ---: | ---: |
|  | Number | Percent |
| 60 Miles or More | 2,461 | 18.8 |
| 50 Miles or More | 2,760 | 21.0 |
| 40 Miles or More | 3,878 | 29.5 |
| 30 Miles or More | 8,727 | 66.5 |
| 20 Miles or More | 11,263 | 85.8 |

Table 6 shows that the most important benefit affecting workers' decisions to leave their present job is higher pay ( $93.5 \%$ ), followed by improved retirement benefits (75.5\%), better educational opportunities (63.0\%), and improved health benefits (57.1\%).

Table 6: Benefit Very Important In Decision to Change Employment

|  | Percent Responding "Yes" |
| :--- | ---: |
| Salary | 93.5 |
| Retirement | 75.5 |
| Educational Opportunities | 63.0 |
| Health Benefits | 57.1 |
| Different Community | 43.0 |

## Manufacturing and Service Sector Scenarios

To obtain a clearer perspective of the percentage of the labor force that would seriously consider a new employment opportunity--the available labor pool--the analysis builds two scenarios. The first scenario is for a manufacturing employer, while the second is for a service sector employer. For both scenarios, the analysis controls for:

1) Whether the individual is willing to drive the necessary miles from his/her community to the location of the hypothetical employer.
2) Whether the respondent's expected wage is above $\$ 12.00$ an hour.
3) Whether the respondent is unwilling to change his/her primary field of employment (for example: service sector to manufacturing).

Figures 5 and 6 (next page) show the available labor pool in Dodge City for each type of employer. The available labor for a manufacturing employer offering up to $\$ 12$ an hour is about 1,539 workers, while at $\$ 10$ an hour the pool is 1,068 workers. For a service sector employer offering $\$ 12$ an hour, the available labor is 1,664 workers. At $\$ 10.00$ an hour, a service sector employer can expect to find 1,099 available workers.

Figure 5: Available Labor for Manufacturing in Dodge City by Hourly Wage

Figure 6: Available Labor for Service Sector in Dodge City by Hourly Wage

Respondents were also asked about the number of full and part time workers other than the respondent that live in their household. Figure 7 shows that $54 \%$ (297 of the 546 respondents that answered this question) have at least one other person in their household that works at a full or part-time job.

Figure 7: Others in Household Working Full or Part-Time

Respondents indicating that at least one other person in their household works full or part-time were asked to provide the number of additional people in the home that are working. Table 7 shows that $46.5 \%$ of the 548 survey respondents have one additional full or part-time worker in their household. $5.8 \%$ have two people in addition to the respondent that work full or part-time. Only $1.8 \%$ of the respondents indicate that three or more additional members of their household work at a full or part-time job.

Table 7: Number of Additional People in Household
that are Working ( $\mathrm{N}=297$ )

|  | Frequency | Valid Percent |
| :--- | ---: | ---: |
| 1 Person | 255 | $46.5 \%$ |
| 2 People | 32 | $5.8 \%$ |
| 3 or More People | 10 | $1.8 \%$ |
| RA-DK | 2 | $0.4 \%$ |
| "No" In Figure 7 | 249 | $45.4 \%$ |
| Total | 548 | $100.0 \%$ |

## Methods

The findings from this survey are based on a random digit telephone sample of 548 adults living in 7 counties in Southwest Kansas. The survey was conducted May 15, 2000 to June 6, 2000 using a Computer Assisted Telephone Interviewing (CATI) system. The Dodge City/Ford County Development Corporation contracted the University Center for Survey Research at the Docking Institute of Public Affairs to conduct this regional labor assessment. A total of 611 households were successfully contacted. In 548 of these households, an adult who is working, unemployed, or retired agreed to do the interview. This represents a response rate of $90 \%$.

Because there is a large Spanish speaking population in the Dodge City labor basin, respondents were given the option of having the survey administered in Spanish or in English. 57 of the 548 respondents chose to have the survey administered in Spanish. $16.3 \%$ of the respondents indicated that they were of Mexican or Hispanic origin when asked, and an additional $1.3 \%$ refused to answer when specifically asked if they were of Mexican or Hispanic origin.

The Docking Institute of Public Affairs in cooperation with the survey sponsors developed the survey instrument. This survey instrument is the property of the Docking Institute. It is available upon request. A detailed summary of the method of analysis used in this report can be found in Joseph A. Aistrup and Mark Bannister, "Assessing the Available Labor Pool: A Survey of the Northeast Kansas Labor Force." Kansas Business Review Spring 1998, 21, 3: 1-10.

[^0]:    ${ }^{1}$ The number that is added to the civilian labor force to create the adjusted civilian labor force statistic is calculated by taking from the survey the total number of students, military, retirees, and long-term unemployed, who state that they are seeking employment, and dividing this number by the total number of respondents. This quotient is then multiplied by the total number of people in the labor basin who are 18 or older.
    ${ }^{2}$ For the purposes of this number, "unemployed" refers not only to unemployed members of the civilian labor force. "Unemployed" also includes any students, homemakers, and retirees that indicate that they are presently seeking employment.

[^1]:    ${ }^{3}$ Compared to the recent Finney County labor basin study there was a smaller percentage of females in the available labor pool. Further analysis (not shown) revealed that this is due to a large number of homemakers not interested in taking a job. This low percentage of women in the available labor pool is not the result of women currently working who are not willing to consider another employment opportunity.

[^2]:    ${ }^{4}$ Numbers do not total accurately due to rounding.
